Contents: [Logo anatomy](#) · [Variations](#) · [Color](#) · [Typography](#) · [Clear space](#) · [Minimum size](#) · [Backgrounds](#) · [Misuse](#) · [File guide](#)

1. Logo anatomy

The logo has three parts:

Part	What it is	Meaning
Mark	A tilted, hand-drawn Enter keycap	"Press enter": we ship, we build, we make things happen. The hand-drawn edge matches the whiteboard / war-room look of the site
Sticker outline	A cream border around the keycap, like a die-cut sticker (the same idea as Notion's logo)	It separates the keycap from <i>any</i> background (light, dark, colored or photo), so the logo stays the same object everywhere
Wordmark	<code>aibuilders.id</code> in Space Grotesk Bold, lowercase	The name and the address are the same thing, so the <code>.id</code> is always included

The outline belongs to the mark. It is not an effect added on top, so never remove it except in the one-color versions. The mark and the wordmark always keep the same proportions and spacing. Never put them together by hand; use one of the lockup files.

2. Logo variations

Primary (default): use this first

The ink keycap with its cream sticker outline. **It works on both light and dark backgrounds.** Only the wordmark color changes: ink on light, cream on dark.

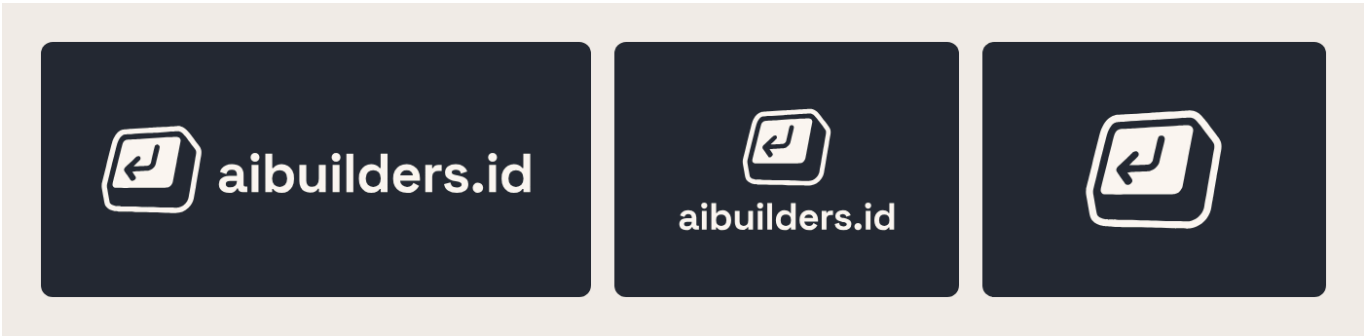

Horizontal lockup	Stacked lockup	Mark only	Wordmark only
			
01-primary/aibuilders-logo-horizontal	01-primary/aibuilders-logo-stacked	01-primary/aibuilders-mark	01-primary/aibuilders-wordmark

Which lockup to use:

- **Horizontal** is the default: website header, documents, slides, email signatures, invoices.
- **Stacked** is for square or narrow spaces: posters, merch, splash screens, certificates.
- **Mark only** is for small sizes, or when the name is already nearby: favicon, avatar, watermark, app icon.
- **Wordmark only** is for running text, footers, very wide and short spaces, or co-branding rows where every partner is shown as text.

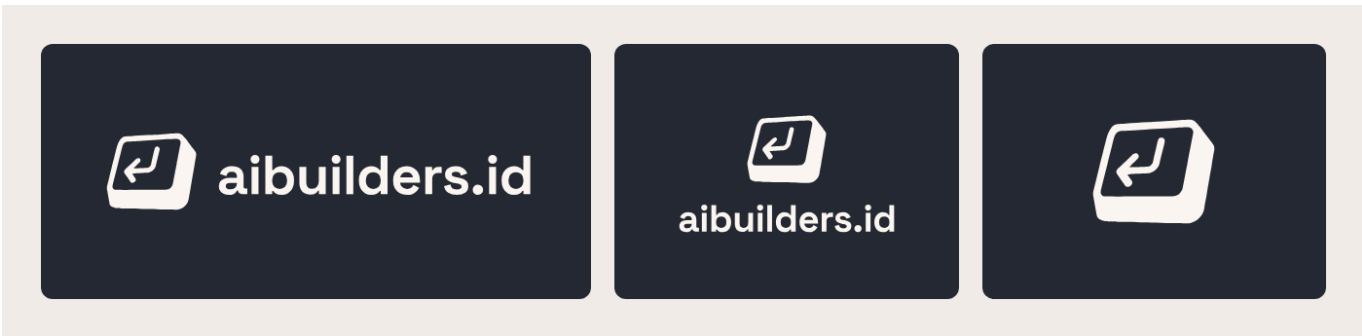

Primary on dark backgrounds

Same outlined keycap, with the wordmark in cream: 01-primary/*-dark-bg . The mark on its own needs no separate file, because the outline does the separating.

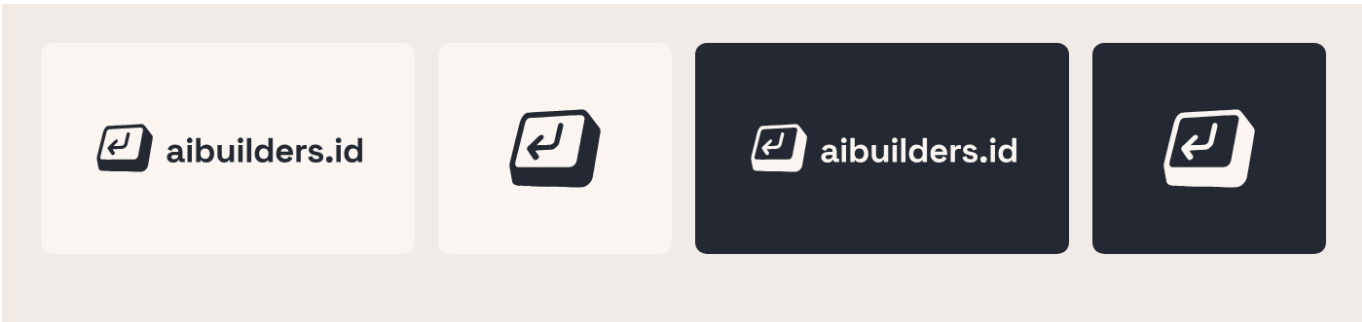

Reversed (optional alternative on dark)

A quieter, flat option for dark backgrounds: the keycap turns cream, the key face takes the background color, and there is no outline. Use it when the outlined keycap feels too loud (e.g. a subtle footer or video watermark). **Primary stays the first choice.**

Mono (one-color): for print and production

For when only one color is possible: screen printing, stamps, embroidery, laser engraving, watermarks, fax/B&W print. The key face is **knocked out** (transparent), so the background shows through. **These are the only versions without the sticker outline**, because a single-color job can't print a second color.

On brand color

Ready-made lockups on brand backgrounds for banners, social headers and slide covers. The keycap is always ink with the cream outline; the wordmark is cream on ink, red and blue, and ink on kraft.

Ink	Kraft	Red	Blue

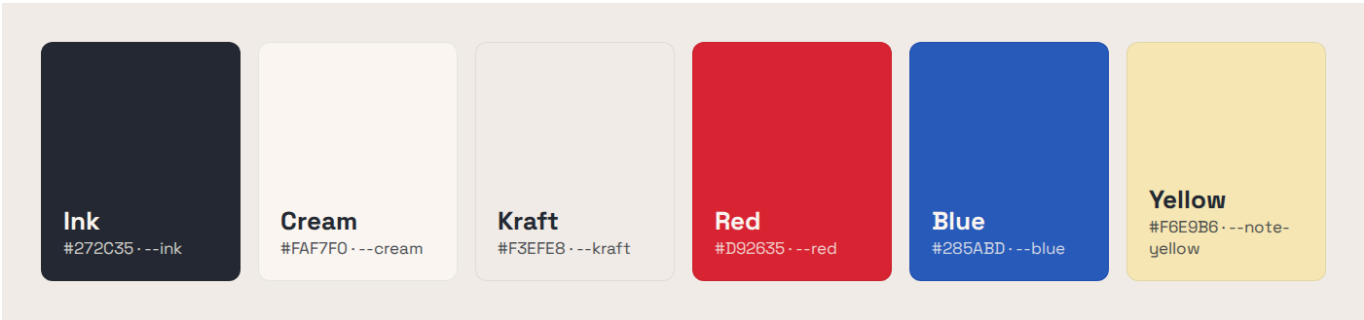

Icon tiles (mark only, square)

For social avatars, app icons, Discord/WhatsApp group pictures, and favicons.

Ink (default)	Kraft	Red	Blue	Yellow	Favicon
					

Ink is the default avatar. Use red, blue or yellow only for campaigns or sub-brands, never as a permanent replacement.

3. Color

The logo uses the same tokens as the website design system (`ai-builders-prototype/ds.css`). **It never uses pure black `#000` or pure white `#FFF` .** Ink and cream are softer and warmer, and they match the kraft-paper surfaces of the site.

Name	HEX	RGB	HSL	CSS token	Role in the logo
Ink	#272C35	39 44 53	220 15% 18%	--ink	Keycap body, wordmark, dark backgrounds
Cream	#FAF7F0	250 247 240	42 50% 96%	--cream	Key face, sticker outline, wordmark on dark
Kraft	#F3EFE8	243 239 232	39 30% 93%	--kraft	Default page background
Red	#D92635	217 38 53	355 70% 50%	--red	Accent background (cream wordmark)
Blue	#285ABD	40 90 189	220 65% 45%	--blue	Accent background (cream wordmark)
Yellow	#F6E9B6	246 233 182	48 78% 84%	--note-yellow	Accent background (ink wordmark)

The logo itself is only ever ink and/or cream. Red, blue and yellow are background colors; the logo is never drawn in them, except as the knocked-out key face that shows the background.

4. Typography

Wordmark	Space Grotesk Bold (700) , all lowercase, tracking -0.015em
Text	<code>aibuilders.id</code> : one word, the <code>.id</code> always included, no capitals, no space
Supporting type (site/UI)	Space Grotesk 400–700 for body, <i>Permanent Marker</i> for hand-drawn headings

The wordmark in these files is **converted to outlines** (vector shapes), so it renders the same everywhere without the font installed. When you write the name in body text, write it as `aibuilders.id` or "AI Builders". Never typeset it yourself to stand in for the logo.

5. Clear space

**Clear space = $\frac{1}{4} \times$
keycap height**

Nothing — text, edges, other logos — enters the hatched zone. Every exported file already includes it.

Keep empty space on every side equal to **$\frac{1}{4}$ of the keycap's height**. No text, image edge, other logo or UI element may enter it. **Every exported file already includes this padding**, so place the file as-is and don't crop it.

When the logo sits next to partner logos, use **$\frac{1}{2}$ of the keycap's height** between them.

6. Minimum size

Version	Digital	Print
Horizontal lockup	120 px wide	30 mm wide
Stacked lockup	80 px wide	20 mm wide
Mark only	24 px	8 mm
Favicon	use <code>favicon.svg</code> / <code>favicon-32.png</code>	—

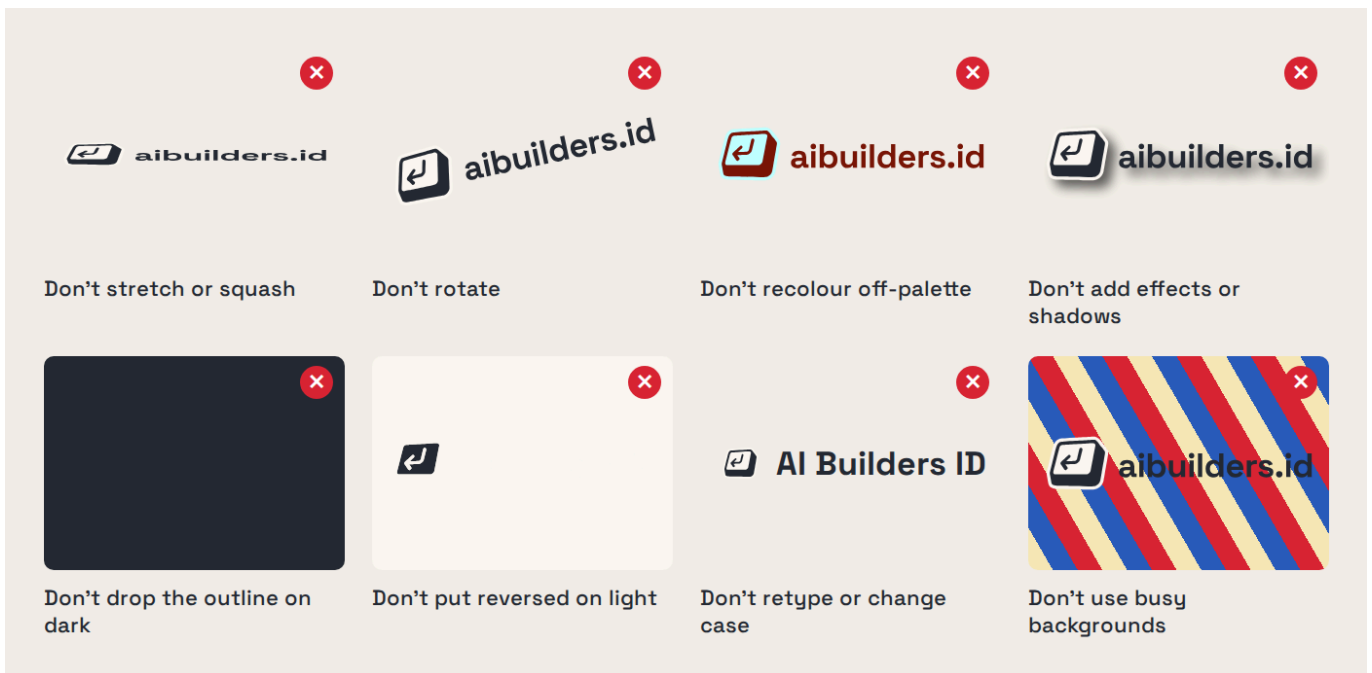

Below these sizes the arrow inside the keycap closes up. If you need it smaller, switch to the mark only.

7. Choosing the right version for the background

Background	Use
Kraft, cream, white, light gray	Primary (01-primary) with ink wordmark
Ink, black, dark photos, dark mode UI	Primary dark-bg (01-primary/*-dark-bg), or reversed (02-reversed) as a quieter alternative
Red or blue	Primary with cream wordmark: 04-on-color/*-on-red , *-on-blue
Yellow / pastel sticky-note colors	Primary with ink wordmark
Busy photo or pattern	The outlined mark holds up on its own; for the full lockup, put a solid ink or kraft panel behind it so the wordmark stays readable
Single-color print job	Mono (03-mono) in ink or cream

Rule of thumb: **the keycap never changes, only the wordmark does: ink on light, cream on dark.** If you have to think about it, the background is too busy.

8. Misuse

- ✗ Don't stretch, squash or skew the logo. Always scale it proportionally.
- ✗ Don't rotate it. The keycap's tilt is already built in.
- ✗ Don't recolor it outside ink/cream, and don't use gradients.
- ✗ Don't add drop shadows, outlines, glows, bevels or 3D effects.
- ✗ Don't remove the sticker outline, or recolor it to anything other than cream. Only the one-color versions go without it.
- ✗ Don't put the reversed logo on light backgrounds, or an ink wordmark on dark ones.
- ✗ Don't retype the name, change its case (`AI Builders ID` , `AiBuilders`), or drop the `.id` .
- ✗ Don't place it on busy photos or patterns without a solid panel.
- ✗ Don't rearrange the mark and the wordmark, or change the spacing between them.
- ✗ Don't go back to the old pure black `#000` / pure white `#FFF` logo.

9. File guide

01-primary/	default, outlined keycap	horizontal · stacked · mark · wordmark · *-
02-reversed/	flat cream alternative for dark	horizontal · stacked · mark · wordmark
03-mono/	one-color, no outline, face knocked out	ink · cream
04-on-color/	lockups on ink / kraft / red / blue	horizontal · stacked
05-icon/	square outlined-mark tiles + favicons	1024 px tiles, favicon 32 / 180 / 512 + fav

Formats - SVG: use it wherever you can (web, Figma, Canva, print vendors). It scales to any size. -

PNG: 2000 px wide, transparent background (icons are 1024 px). Use it where SVG isn't accepted (Google Slides, WhatsApp, some social tools).
